

NFARL Club Meeting August 16, 2022 Let's Build Some Antennae!

Join us for a group antenna build at the August NFARL club meeting on Tuesday, August 16!

According to NFARL Vice President Mike Riley KN4OAK, we will be “building a roll up 2m/70 cm ‘slim jim’ type antenna. It will be based on the unit featured in the March 2007 QST by Edison Fong WB6IQN. We will use a team approach to build. Up to five teams will each build an antenna (depends on the number of attendees).” All needed materials will be provided and copies of building instructions will be available to take home after the meeting. The completed antennae will become door prizes at this and perhaps, future club meeting(s).

The time frame for this meeting will be shifted ahead a half hour to accommodate the antenna building project. The social half hour will begin at 6:30 PM and the club meeting/**antenna build will begin around 7:00 PM.** **There will not be a formal meeting, just the building project.**

NFARL club meetings are held at the Preston Ridge Community Center, which is on the backside of the YMCA at 3655 Preston Ridge Road in Alpharetta. The city will have some construction work going on in the building where we meet. We will meet in the same room, just at the far end.

Due to the construction, the meeting **cannot** be shared on Zoom. So please join us for this hands on skill building event!
